

AiPlayer::decideBuildHouse

AiPlayer::decideSellHouse

AiAdapter::convertHouseValue

```
graph LR; A[AiPlayer::decideBuildHouse] --> C[AiAdapter::convertHouseValue]; B[AiPlayer::decideSellHouse] --> C;
```

The diagram illustrates a mapping from two methods in the `AiPlayer` class to a single method in the `AiAdapter` class. On the left, two white rectangular boxes with black borders contain the text `AiPlayer::decideBuildHouse` and `AiPlayer::decideSellHouse`. On the right, a gray rectangular box with a black border contains the text `AiAdapter::convertHouseValue`. Two blue arrows originate from the right side of the first two boxes and point towards the left side of the gray box, indicating that both `decideBuildHouse` and `decideSellHouse` methods delegate their logic to the `convertHouseValue` method in the `AiAdapter` class.
